Synopsis

Prof. Jordi Sort (aged 48) is currently working as an **ICREA Research Professor** at the Universitat Autònoma de Barcelona (UAB), where he leads the **Group of Smart Nanoengineered Materials, Nanomechanics and Nanomagnetism (Gnm³) (2021-SGR-00651)**, now consisting of **around 18 members** including 5 Senior researchers, 5 Postdocs, 6 PhD students, 1 Technician and 1 Project Manager. The research activities of the group focus on the synthesis of **functional materials** (electrodeposited films, lithographed structures, porous materials, bulk metallic glasses, nanocomposites, etc.) for **advanced engineering applications** (nanomechanical, magnetic, magnetoelectric and catalytic properties). The group develops new types of materials, whose microstructure can be precisely controlled at the nanoscale, to boost new functionalities that go **beyond the state of the art**. For further details on our group, see: <https://jsort-icrea.uab.cat/>.

Some of the **main achievements** of Prof. Sort's research outcome can be summarized as follows: (i) development of new approaches to control the magnetic behavior of materials by non-magnetic means (mechanical strain, ion irradiation or voltage); (ii) transfer of domains (i.e., bits of data) from ferromagnetic to antiferromagnetic materials, which is appealing for the development of energy-efficient hybrid memories (e.g., neuromorphic computing or anti-hacking memory architectures); (iii) discovery of "exchange biased vortices" and "magneto-ionic vortices", two new types of magnetization reversal mechanisms with applications in magnetic data storage (including analog computing) and spin-valve magnetic sensors; (iv) study of the nanomechanical properties of unconventional metallic alloys, metallic glasses and regoliths collected from the outer space (Moon, asteroids, comets); (v) development and characterization of new types of biomaterials including implants and magnetically guided nanorobotic platforms for targeted drug delivery; (vi) enhancement of the mechanical, magnetic and catalytic performance of environmentally friendly and sustainable nanoporous oxides and alloys for energy efficiency applications and water remediation.

Prof. Sort got his PhD degree in Materials Science at UAB in 2002. He performed postdoctoral research stays at **SPINTEC** (Grenoble, France) and **Argonne National Laboratory** (USA). He also stayed several months at the **High Magnetic Fields Laboratory** (Grenoble, France), **Los Alamos National Laboratory** (USA), the **Rheinisch-Westfälische Technische Hochschule** (RWTH, Aachen, Germany) and the **Helmholtz-Zentrum Dresden-Rossendorf** (Germany). Overall, he has **over four years of research experience abroad**.

So far, Prof. Sort has **supervised 20 PhD students** (6 more are in progress) and has published more than **375 articles**. These publications have received more than **12300 citations** (**h = 56**) according to the **ISI Web of Science** metrics (**h = 66** and **> 16100 citations** according to **Scholar Google**). The papers have been published in prestigious journals (mostly Q1) e.g.:

9 Phys. Rev. Lett., 1 Nat. Nanotechnol., 2 Nat. Commun., 4 Adv. Mater., 4 J. Am. Chem. Soc., 2 Sci. Rep., 1 Phys. Rep., 7 Adv. Funct. Mater., 7 Small, 24 Appl. Phys. Lett., 3 J. Mater. Chem. A, 15 Nanoscale, 15 Electrochim. Acta, 16 ACS Appl. Mater. Interf., 4 ACS Nano, 4 APL Materials, etc.

The work of the Team has been presented as **invited/keynote/plenary talks in around 230 international conferences**. Prof. Sort has filled **7 patents** and has managed **38 national/international research** projects (he has participated as researcher in more than 66 research projects). He has also **Agreements with the Private Sector**, with the companies *Gestamp-Linares S.A.*, and the *CETEMMSA-Eurecat* and *IK4-CIDETEC-San*

Sebastian Technological Centers, Singulus Technologies, and also with the Fábrica Nacional de Moneda y Timbre.

During **the last 5 years**, concerning citations, his papers have been cited more **5000 times**, with **more than 1000 citations/year** on average. Prof. Sort has also co-authored **5 book chapters** and **co-edited 5 books** during the period 2014-2024 on fields related to Nanotechnology. In this period, Prof. Sort has also served in the **Editorial Board** of various journals: *Nanomaterials*, *Materials* and *Coatings* from MDPI, *3D Research* from Springer, etc. He was main **Section Editor in Nanomaterials** for 5 years and is now **Associate Editor of APL Materials**. He has served as a member of various **Evaluation Commissions**: European Research Council (**ERC, PE11 CoG-2022 Panel Member**), Agencia Nacional de Evaluación y Prospectiva **ANEP**, Catalan Agency for Management of University and Research Grants **AGAUR**, "Deutsche Forschungsgemeinschaft" **DFG**, **Science Foundation Ireland**, **National Research Foundation – Singapore**, etc. Furthermore, he has also been **Co-organizer or Programme Committee member of several conferences**, such as the 58th MMM, ISMANAM, Intermag 2014, 2015 E-MRS, ICM 2015, ENM Meetings, FIMPART, **MMM 2022** (as **Program Co-Chair**), etc. Regarding our **outreach activities**, some of our results have been featured in national and international media (TV3, RTVE, ABC, Cordis, Science News, etc.). He is also teaching nanomagnetism at the **Official Master on Advanced Nanoscience and Nanotechnology** at UAB.

Prof. Sort has been Coordinator of two European Training Networks ('SELECTA' and 'BeMAGIC'), and Principal Investigator of several Grants from the European Research Council (**ERC**): 'SPIN-PORICS' **Consolidator Grant** (2014), 'MAGIC-SWITCH' **Proof of Concept Grant** (2019) and 'REMINDS' **Advanced Grant** (2022). The 'REMINDS' Project with title "Voltage-Reconfigurable Magnetic Invisibility: A New Concept for Data Security Based on Engineered Magnetoelectric Materials" aims to set the foundations of a new 'security-by-materials-design' approach in which innovative magnetoelectric materials and protocols will be developed to achieve highly energy-efficient and self-protected primitives for diverse data security technologies. The project allows me to merge my knowledge in **magnetoelectricity** with my former studies on **magnetic domain imprinting**.

Prof. Sort received the **PhD UAB Extraordinary Award** in 2004 and his work was also awarded by the Catalan Physical Society (**Jordi Porta i Jué's Prize**, 2000), the Spanish Royal Physical Society (**Young Researcher Award in Experimental Physics**, 2003), the Federation of European Materials Societies (**FEMS Materials Science & Technology Prize**, 2015) and UPC/Naturgy (**Duran Farell Award**, 2020).

Prof. Sort is **Fellow of the Institute of Physics (IOP)** and member of the **Technical and Educational Comittess** of the **IEEE Magnetic Society**, as well as **AdCom Member of the MMM**.

Electrodeposition of magnetic, superhydrophobic, non-stick, two-phase Cu–Ni foam films and their enhanced performance for hydrogen evolution reaction in alkaline water media

We electrodeposited two-phase Cu–Ni magnetic metallic foams (MMFs) with tunable compositions and morphologies by taking advantage of the hydrogen co-evolution as a source of micro/nanoporosity. The physico-chemical properties (e.g. ferromagnetic behaviour, superhydrophobicity and electrochemical activity towards hydrogen evolution) of the in-situ prepared MMFs were investigated.
